The prior art fails to render obvious the claimed method for distance and angle positioning of a plurality of close-range target objects including, inter alia, transmitting a signal, receiving the signal reflected from the plurality of target objects using at least two adjacent receiving antennae, measuring propagation time differences of the reflected characteristic signal to the at least two adjacent receiving antennas so as to determine respective distances of the target objects, determining an angle of incidence for each of the target objects by subjecting each of the reflected signals received by the receiving antennae to a correlation with the transmitted signal so as to determine a complex correlation function that uniquely associates the measured phase differences with a distance as interconnected and functionally claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
